Age: 38

Gender: Male

Mob.: 6204389136

Education: Matric

Farming experience:14

District: Godda, State: Jharkhand

Brief about innovation:

Cattle hooves were initially cleansed with hot water to remove debris and prepare the wounds. Next, a soothing paste-crafted from roasted eggplant (brinjal), two camphor pieces, and coconut oil-was gently applied. This lotion was applied on the lesions twice daily for 10 consecutive days. After applying lotion no maggots developed, underscoring its efficacy against traumatic wound myiasis remarkably.

Specification/ utility:

In under a week, the paste accelerated healing-hooves closed and swelling eased significantly within 5–7 days. Camphor served as a strong antiseptic and maggot deterrent
